SYSTEM OF EQUATIONS BIBLIOGRAPHY
1972-Present (18 entries)

1. Mikhail, W.M. (1972a). Simulating the small-sample properties of econometric estimators. *Journal of the American Statistical Association* 67(339): 620-624.
2. Mikhail, W.M. (1972b). The bias of the two-stage least squares estimator. *Journal of the American Statistical Association* 67(339): 625-627.
3. Kelly, J.S. (1975). Linear cross-equation constraints and the identification problem. *Econometrica* 43(1): 125-140.
4. Mikhail, W.M. (1975). A comparative Monte Carlo study of the properties of econometric estimators. *Journal of the American Statistical Association* 70(349): 94-104.
5. Amemiya, T. (1977). The maximum likelihood and the nonlinear three-stage least squares estimator in the general nonlinear simultaneous equation model. *Econometrica* 45(4): 955-968.
6. Gallant, A.R. (1977). Three-stage least-squares estimation for a system of simultaneous, nonlinear, implicit equations. *Journal of Econometrics* 5: 71-88.
7. Gallant, A.R. and Jorgenson, D.W. (1979). Statistical inference for a system of simultaneous, non-linear, implicit equations in the context of instrumental variable estimation. *Journal of Econometrics* 11: 275-302.
8. Swamy, P.A.V.B. (1980). A comparison of estimators for undersized samples. *Journal of Econometrics* 14: 161-181.
9. Wilson, B.K. (1985). Simultaneity and its impact on ecological regression applications. *Biometrics* 41: 435-445.
10. Borders, B.E. (1989). Systems of equations in forest stand modeling. *Forest Science* 35(2): 548-556.
11. Spanos, A. (1990). The simultaneous-equations model revisited: statistical adequacy and identification. *Journal of Econometrics* 44: 87-105.
12. Schmidt, P. (1990). Three-stage least squares with different instruments for different equations. *Journal of Econometrics* 43: 389-394.
13. Hasenauer, H., Monserud, R.A. and Gregoire, T.G. (1996). Cross-correlations among single tree growth models. In: Mowrer, H.T., R.L. Czaplewski, and R.H. Hamre (eds.). *Proceedings of 2nd International Symposium on Spatial Accuracy Assessment in*

Natural Resources and Environmental Sciences. Fort Collins, Colorado. U.S. Department of Agriculture, Forest Service, General Technical Report RM-GTR-277: pp 667-675. (S1208, I 100).

14. Lynch, T.B. and Clutter, M.L. (1998). A system of equations for prediction of plywood veneer total yield and yield by grade for loblolly pine plywood bolts. *Forest Products Journal* 48(5): 80-88.
15. Lin, X., Ryan, L., Sammel, M., Zhang, D., Padungtod, C. and Xu, X. (2000). A scaled linear mixed model for multiple outcomes. *Biometrics* 56(2): 593-601.
16. Geys, H., Regan, M.M., Catalano, P.J. and Molenberghs, G. (2001). Two latent variable risk assessment approaches for mixed continuous and discrete outcomes from developmental toxic data. *Journal of Agricultural, Biological, and Environmental statistics* 6(3): 340-355.
17. Rose, C.E., Jr. and Lynch, T.B. (2001). Estimating parameters for tree basal area growth with a system of equations and seemingly unrelated regressions. *Forest Ecology and Management* 148: 51-61. (Also in SUR folder)
18. Green, E.J., Strawderman, W.E., Amateis, R.L. and Reams, G.A. (2005). Improved estimation for multiple means with heterogeneous variances. *Forest Science* 51(1): 1-6.
